HOTstream Cast, now embedded! The Next-Gen Streaming Solution for Hospitality

Apple AirPlay

Google Cast

NETFLIX

YouTube

Dongle & device-free

MCOMS is leading the way with Embedded Casting, a seamless, certified content streaming solution designed for the latest hospitality TV models. No external dongles or extra hardware — just a simple, secure experience for enjoying streaming

Easy, Secure & Hassle-Free for Guests

All guests need to do is scan a QR code on the TV and they can securely stream content from their favorite app or even their own content stored on their device, offering guests the same content streaming experience they enjoy at home. MCOMS Embedded Casting solution provides managed access to casting TVs, allows monitoring by your staff, and ensures the protection of guests' privacy.

Future-Proof Your Hotel's Technology

For properties with older TVs that don't support built-in casting, MCOMS provides a smooth transition by continuing to support Android™ devices and Apple TVs — ensuring every guest enjoys the same seamless experience. When a Hotel decides to upgrade, they can do it gradually without having to replace all TVs at once. MCOMS casting solution supports operating both types of TVs at the same time.

The Future of In-Room Entertainment Is Here!
